

Hidradenitis Suppurativa patients in Active group had statistically and practically meaningful +22.5% difference in HiSCR response compared to placebo group at week 16 vs baseline

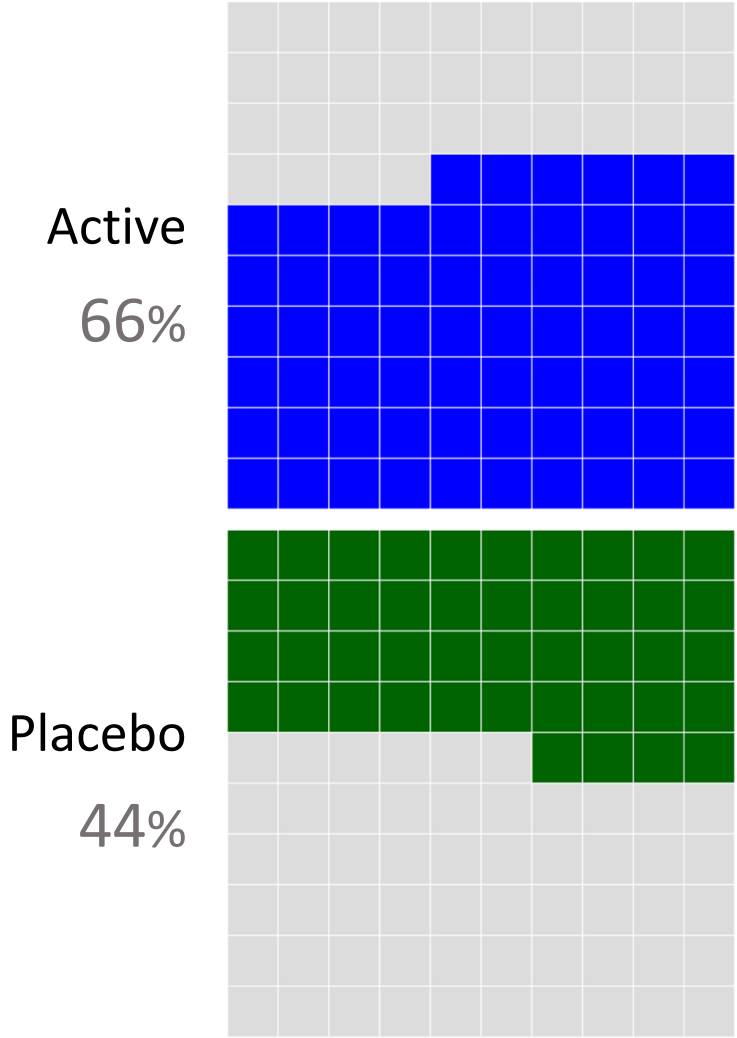

Illustrative

Active group share of HiSCR responders vs **Placebo** group when the baseline data are compared to the follow-up data (at week 16).

Hidradenitis Suppurativa patients in Active group had statistically and practically meaningful +22.5% difference in HiSCR response compared to placebo group at week 16 vs baseline
